

P.j.

**Project pseudocode**

Write an example of **pseudocode** to explain what you want to do in a function and take a screenshot of it.

Pseudocode

New Object Called Shopping Basket - Empty  
 Call method to add item to shopping basket - Add Item  
 Call method to add item to shopping basket - Add Item  
 Call method to add item to shopping basket - Add Item

Get total items in basket and total

```

    new counter variable set to 0
    new total variable set to 0
    Loop through the the Shopping basket array
        Increment counter
        Total = Total + value of item
    end Loop
  
```

Return

Call 10 % discount method

```

    Check total >= £20 and discount card
      If >= £20 Then subtract 10%
        Total = Total * 0.90
      End
      If Discount card then subtract 2%
        Total = Total * 0.98
      End
    End
  
```

End

End
